

Download and Setup

R, RStudio and R packages:

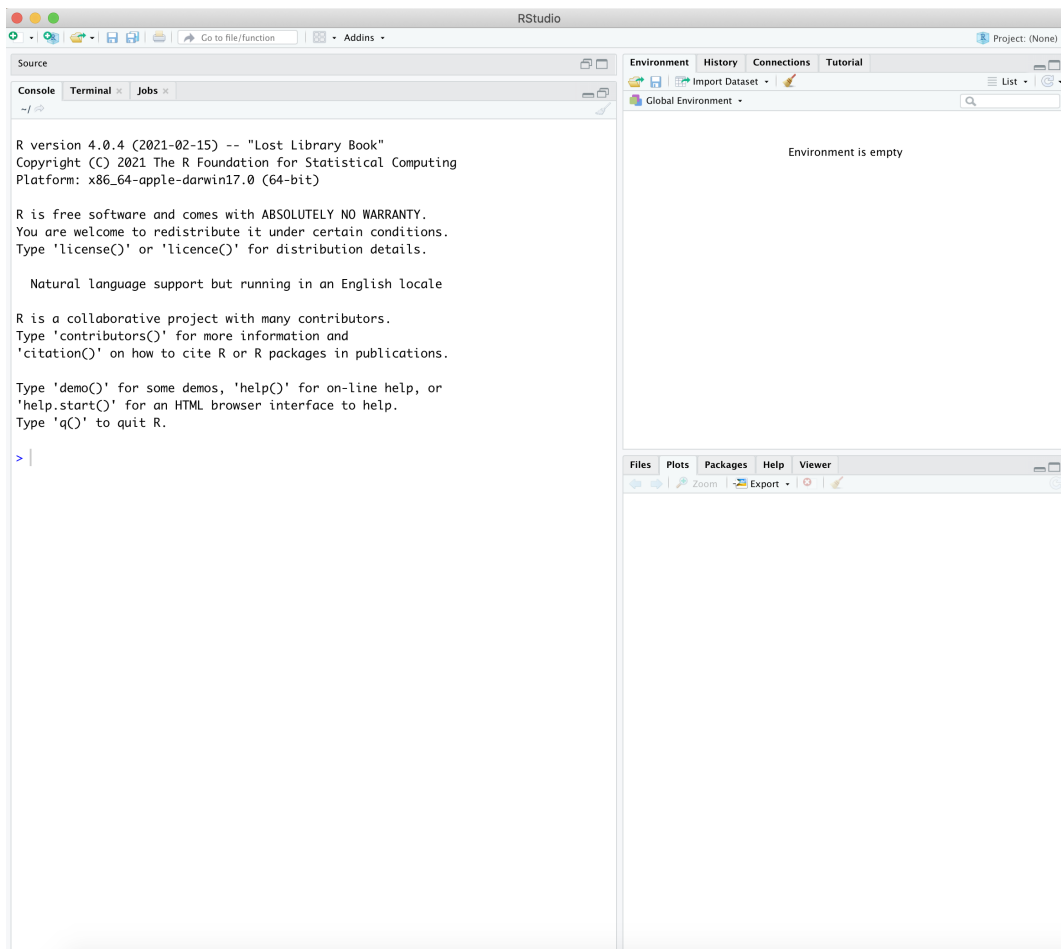

To use RStudio, you must have R installed on your computer. First, download R from the link below:
<http://cran.r-project.org>.

RStudio

Use the link below to install RStudio.

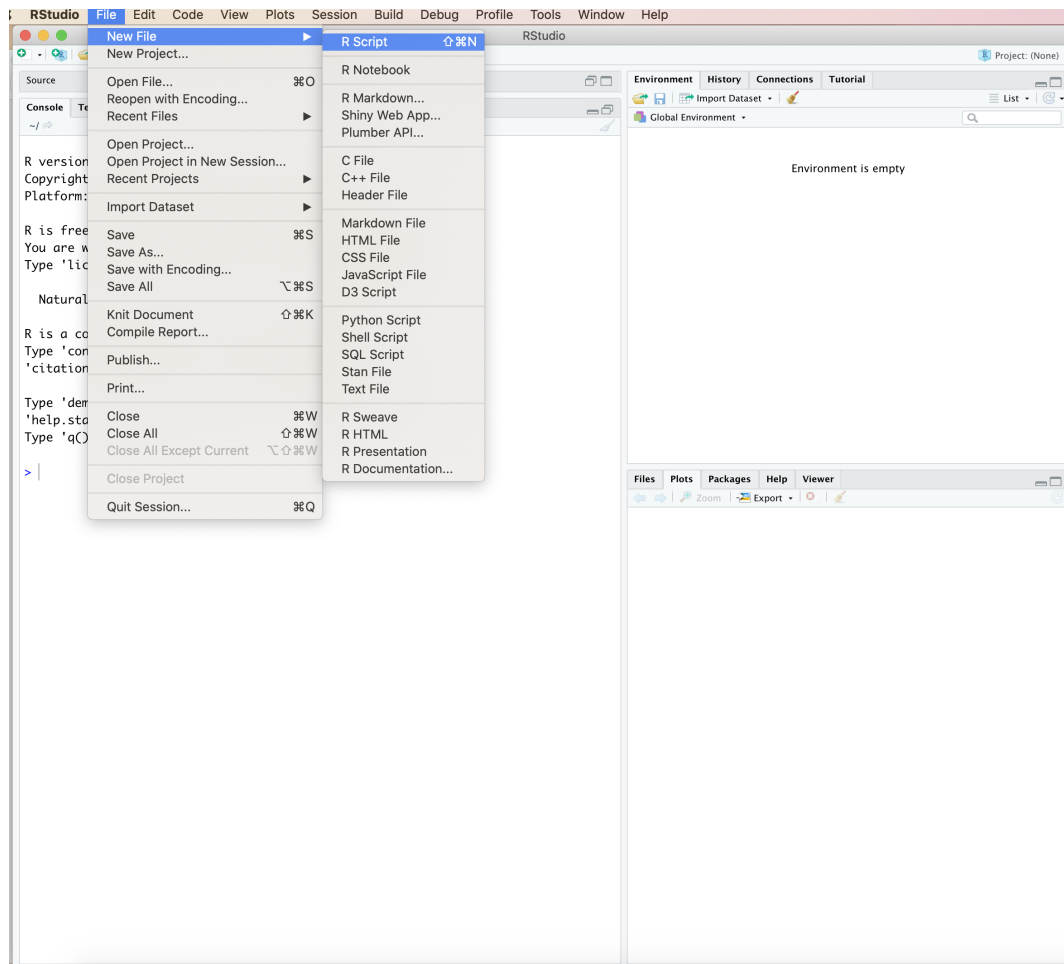

<https://www.rstudio.com>.

The screenshot of RStudio is as follows:

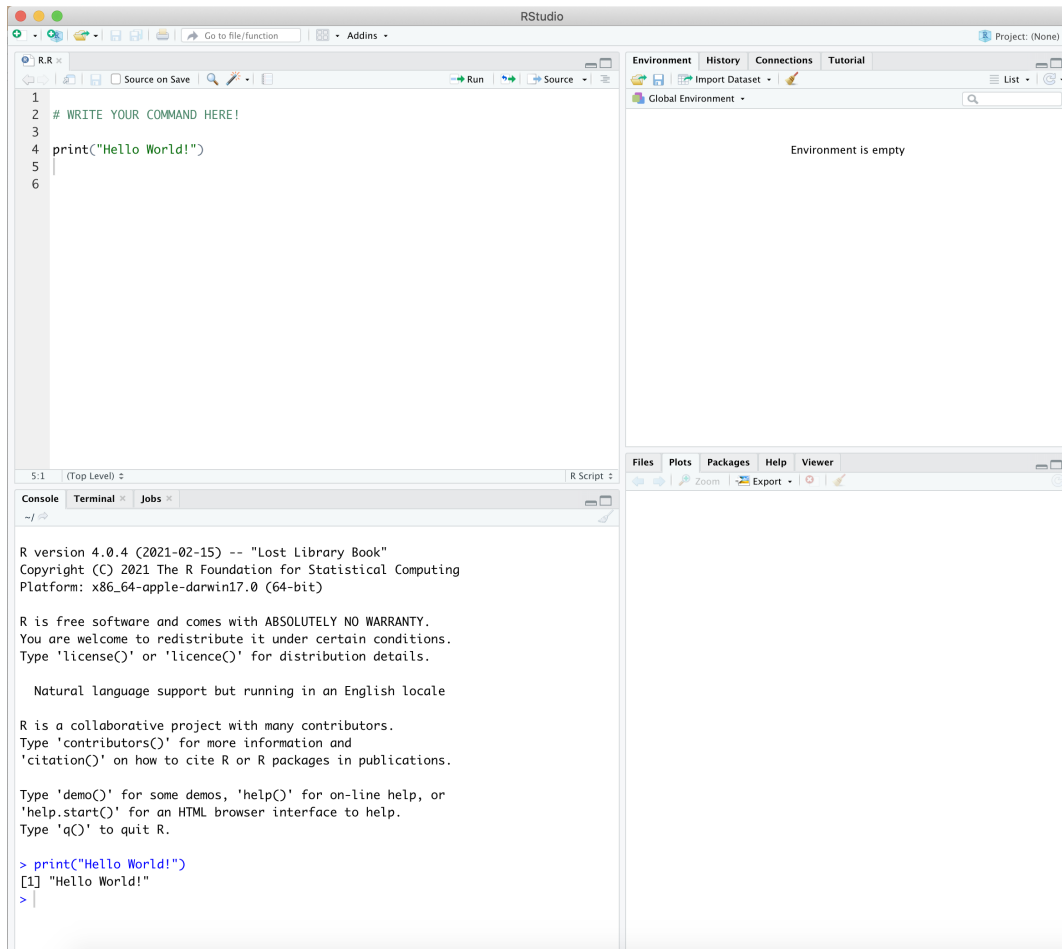

You can type your commands directly into the console.

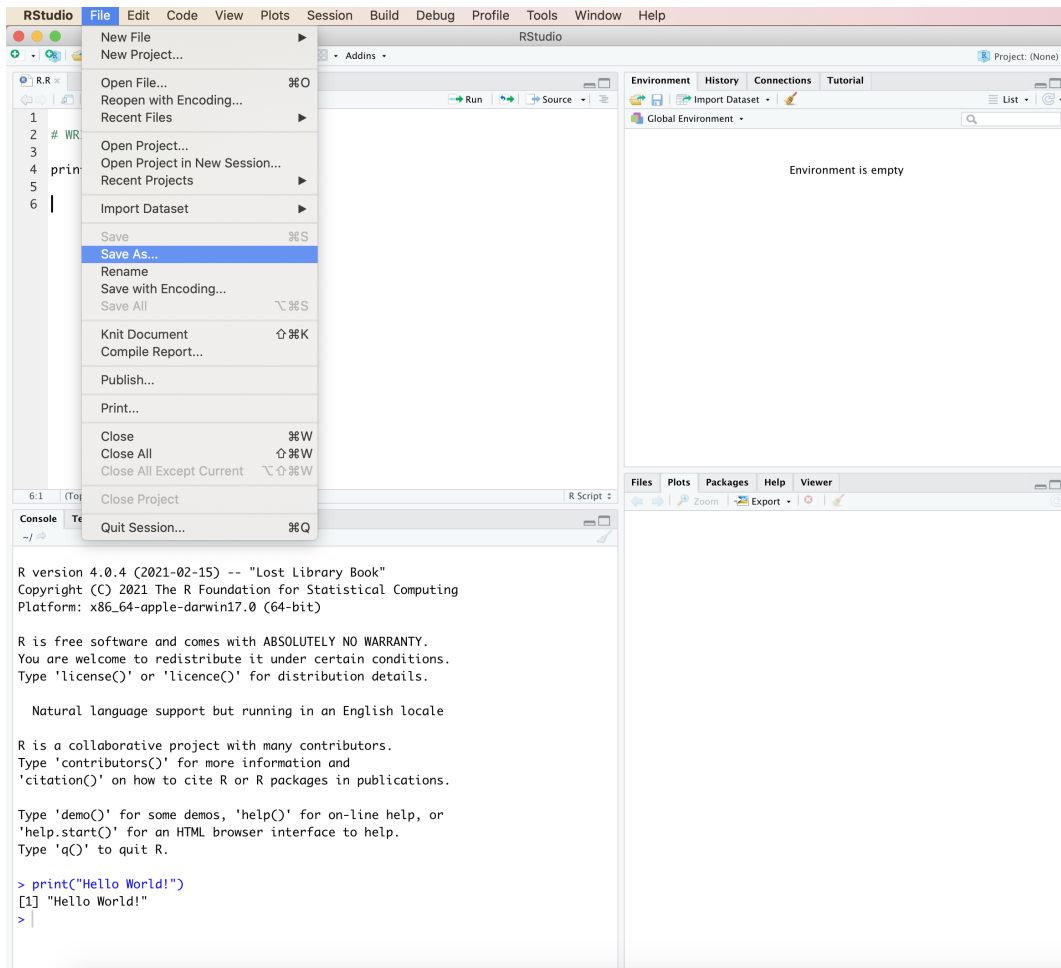

However, it is much more useful to open a new “script” and write the commands there, to be able to return to the commands later. You can create a new “script” as in the screen below.

Continue..

Save the file..

You are ready to work with your commands through this file or other files you will prepare!
